# sketching

So, I started off this web page design process by grabbing a pen and paper and sketching out a couple of ideas. It was fun to put my creativity to work and see my ideas take shape on paper.
careful consideration of various design elements, but I'm thrilled with the end result!

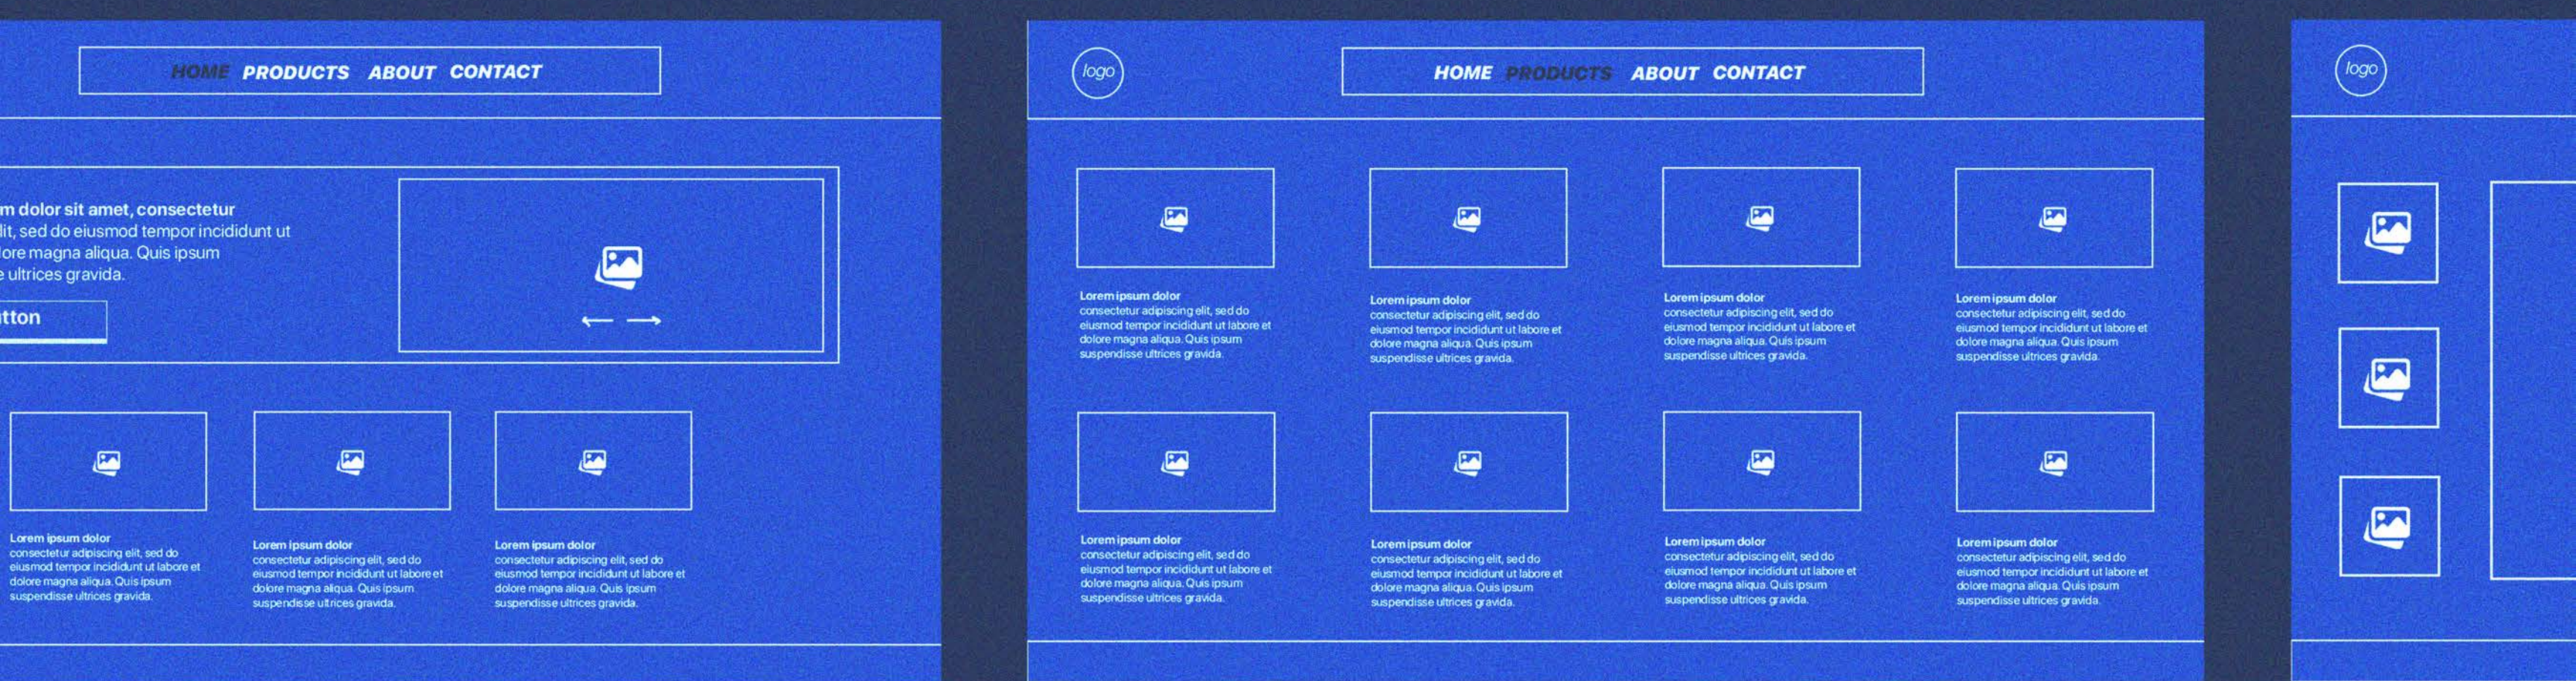

Once I had a handful of sketches that I was happy with, I opened up Adobe Photoshop and started digitalizing them.
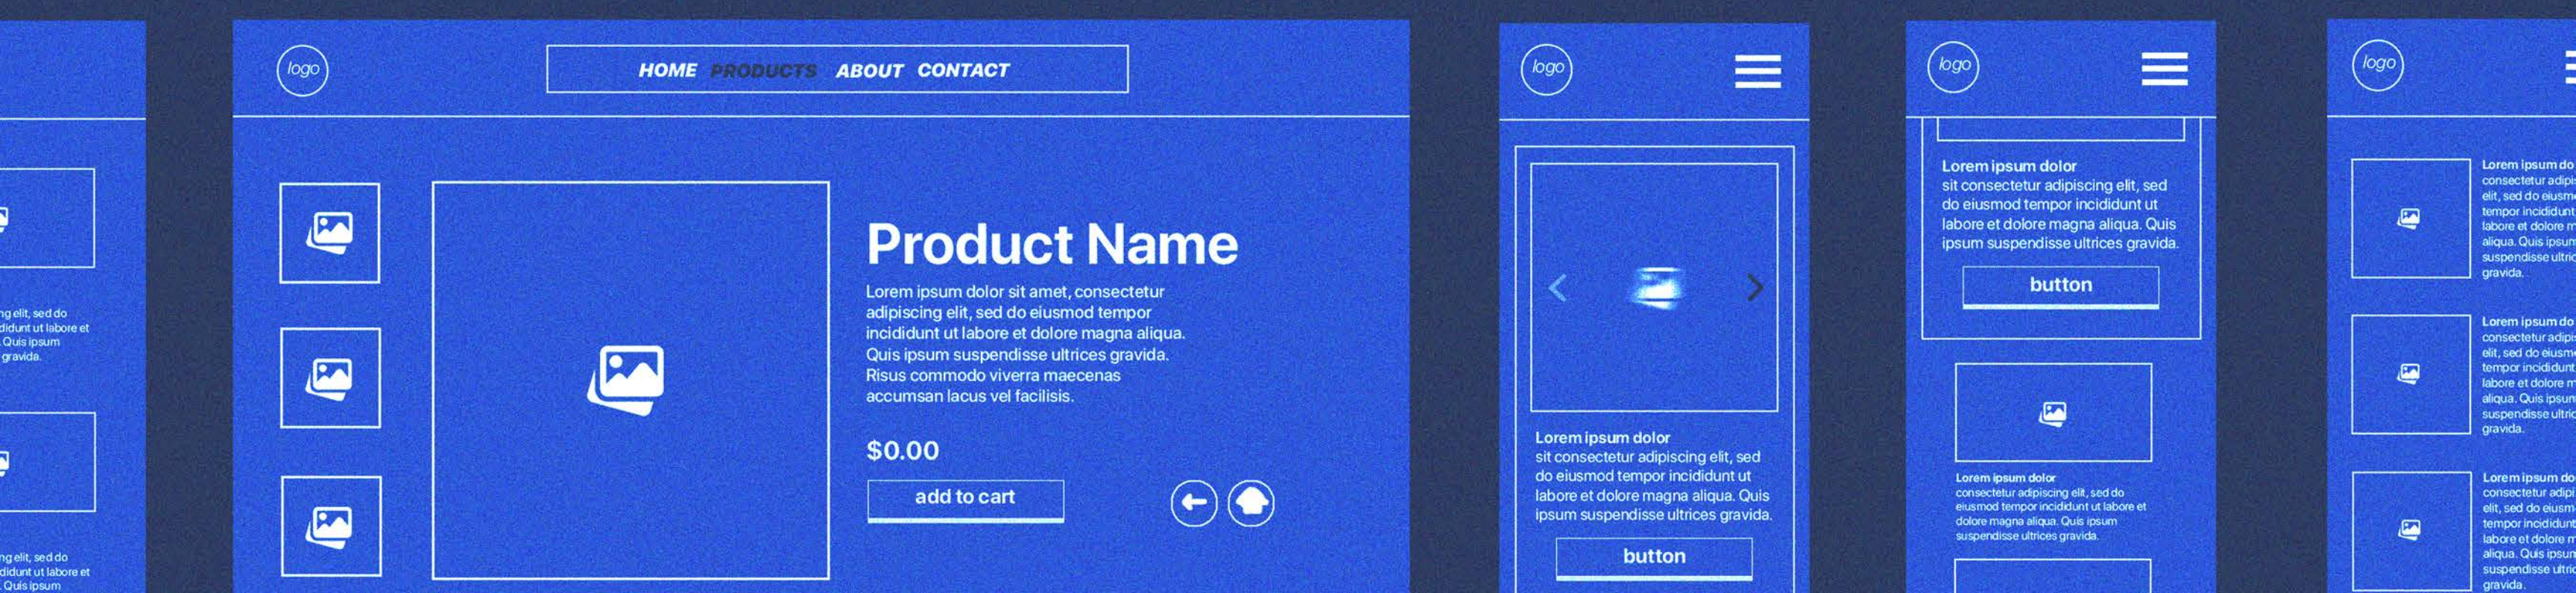

digitalizing the sketches & wireframing

It was cool to see my hand-drawn sketches come to life on the screen, and I could tweak and refine the design elements like color schemes, typography, and content placement to make sure everything looked just right.

I also made sure to keep UX and UI design principles in mind. I wanted to make sure that the web page would be easy to navigate and responsive on different devices, so that users could have a smooth experience no matter what device they were using.
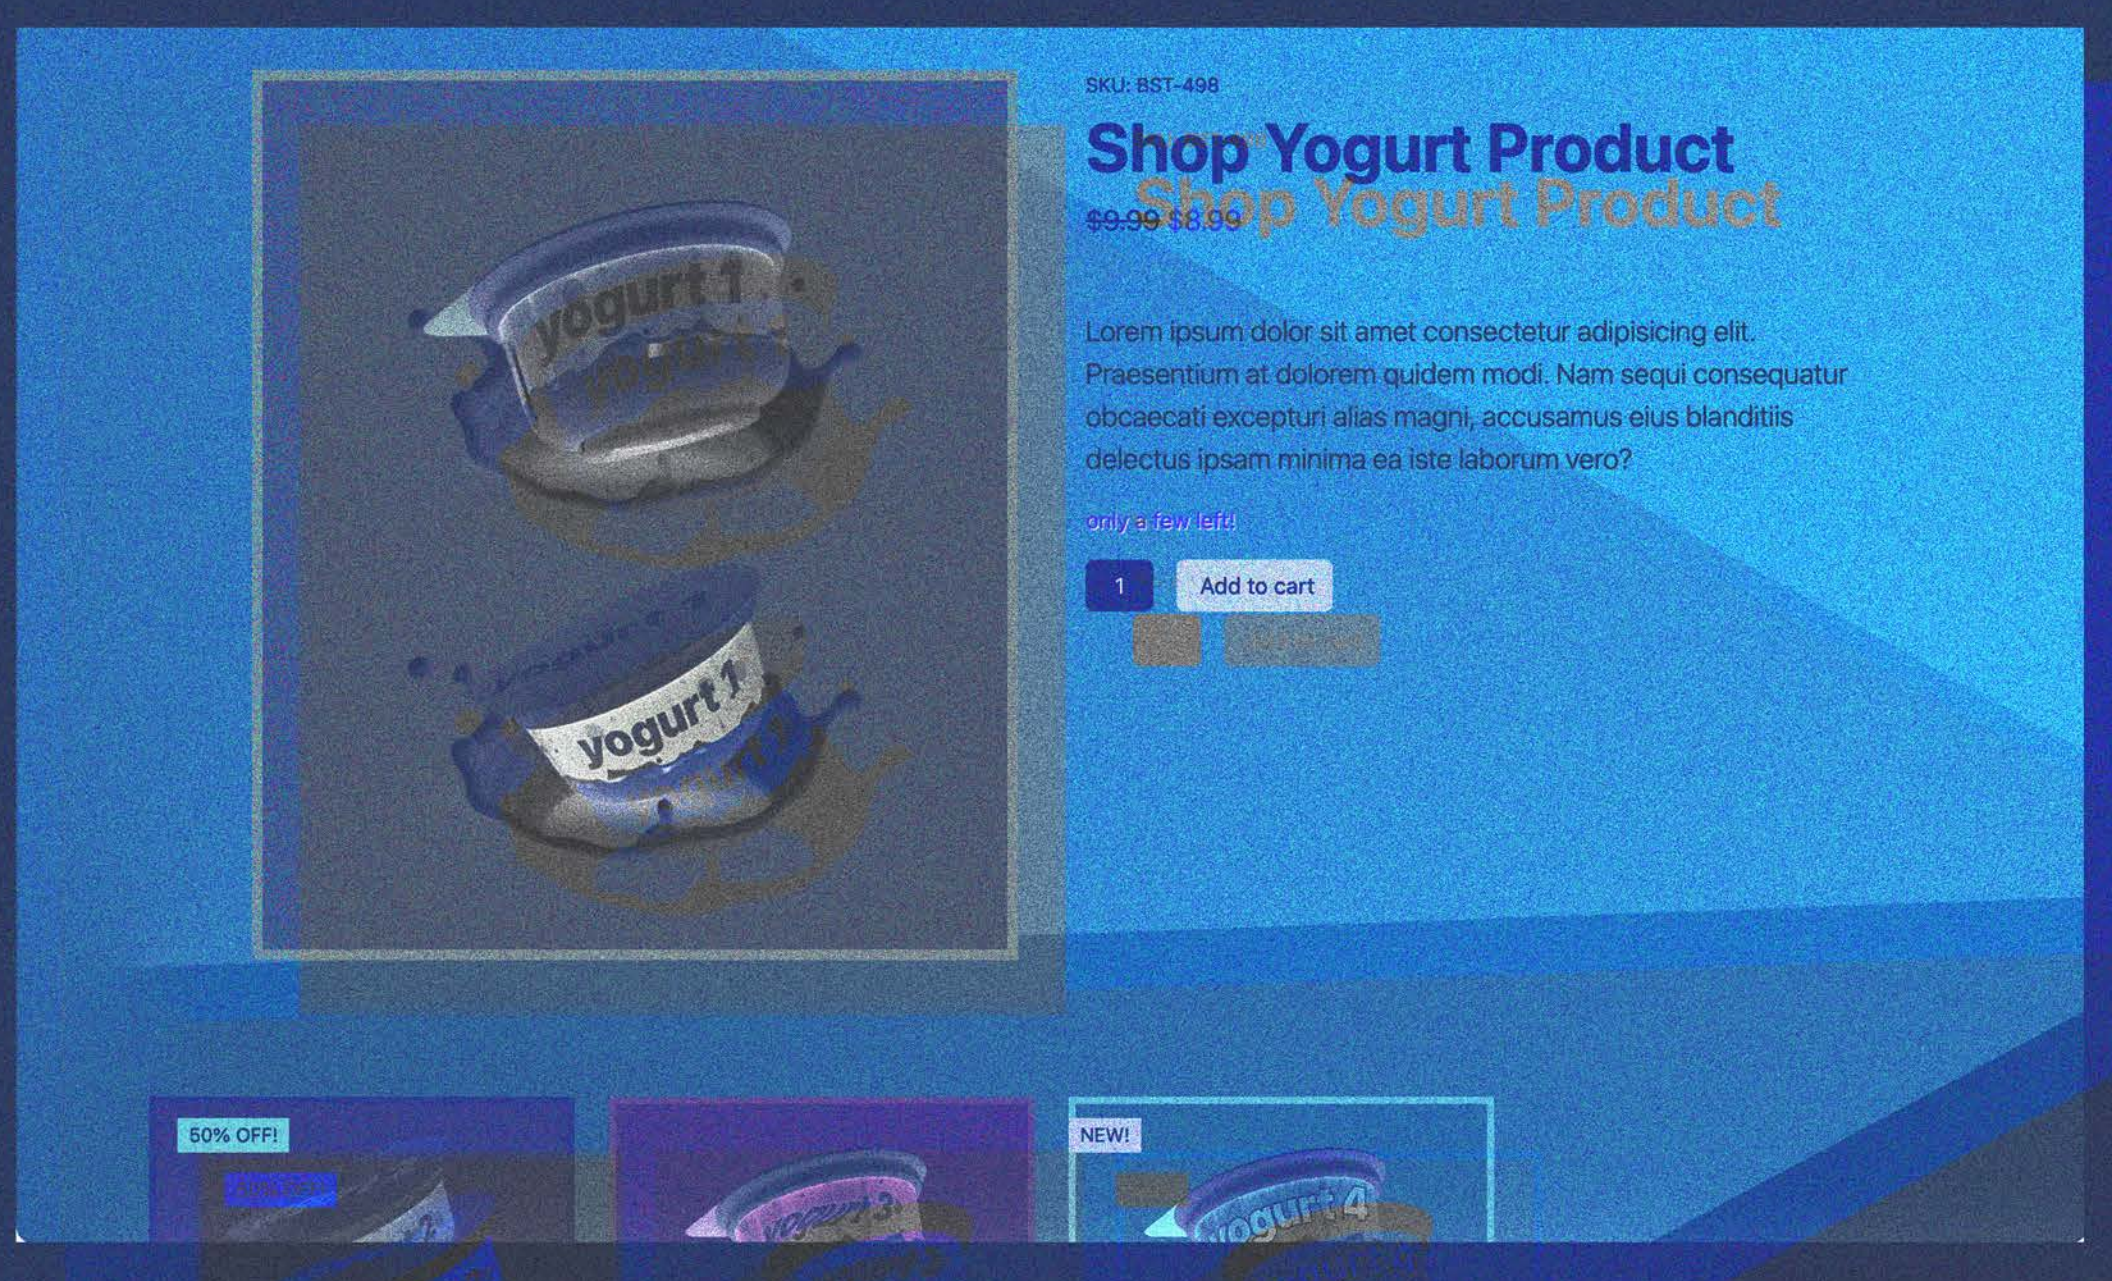

code

I have used a framework called "bootstrap" in order to create this simple, and responsive web page.

Since I didn't know how to use bootstrap, I had to make a lot of research online for the simplest tasks...

I have had so much stress at first but eventually it kept getting better and easier.

Most of the code I have wrote myself (using the bootstrap components), and some I have found online (like the product detail section at the "products" page).
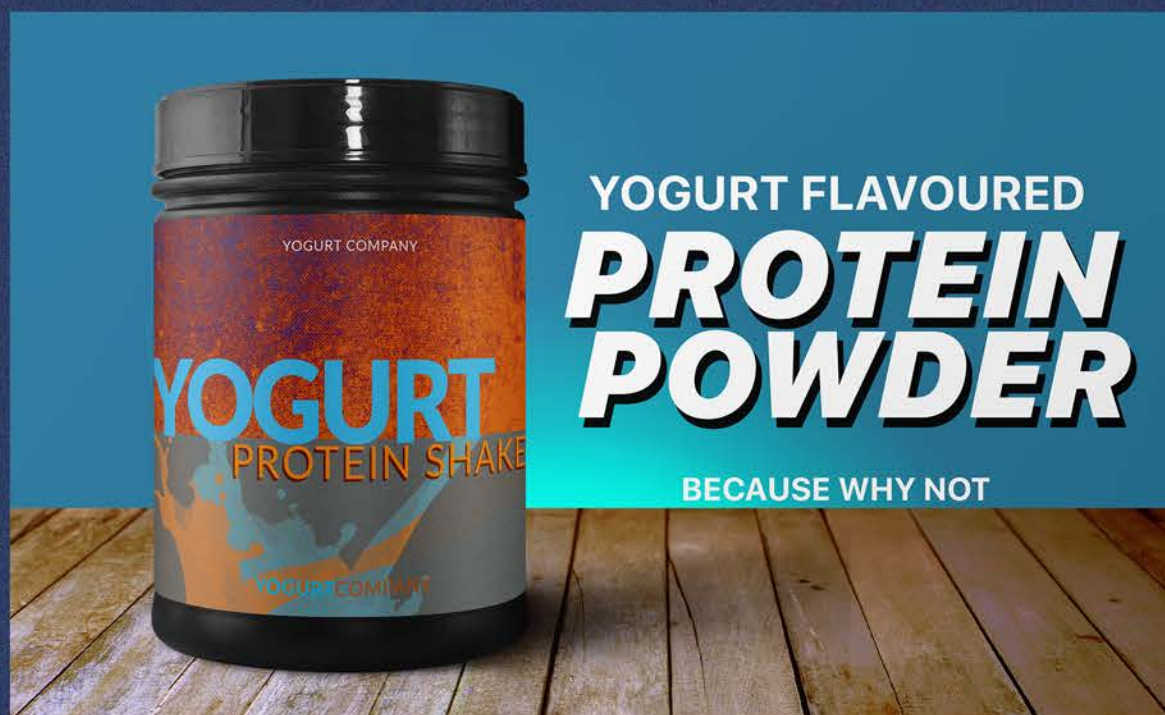

images

For the images that are used in the website,
I have used a website called "freepik".

This website allowed me to edit pre-made PSD
mockup products and customize it to my own
designs.

So I have used these mockups for the placeholder
pictures and more...

sum up

In summary, it has been a stressful yet highly informative and valuable learning experience.

Bootstrap has been a great aid in simplifying **complex concepts** and making them easy enough for me to create.

It helps create responsive website design with ease and is really great at it.

However I didn't feel as free as writing pure CSS. But overall it was a fun experience.

In summary, it has been a stressful yet highly informative and valuable learning experience.
